VERIVIT HY D3

Direct Source of Vitamin D3 for Animals

Ensuring Optimal Health with Calcidiol

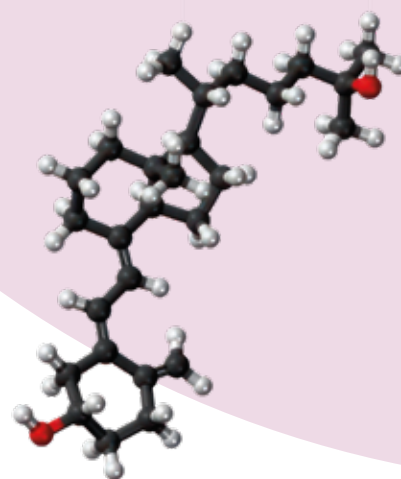

What is **VERIVIT Hy D3 Liquid?**

VERIVIT Hy D3 Liquid is a groundbreaking nutritional supplement that provides a unique source of Vitamin D3 known as calcidiol (25(OH)D3). Unlike traditional Vitamin D3 supplements, which must first be processed by the liver, VERIVIT Hy D3 offers direct availability of calcidiol, facilitating optimal health and performance in livestock and poultry.

**Quality You Can
Trust, Prices You
Can Afford!**

The Advantage of Calcidiol (25(OH)D₃)

When Vitamin D₃ is fed, it must be absorbed and transported to the liver, where it is converted to 25(OH)D₃. However, the liver can act as a bottleneck, inhibiting this conversion—especially during periods of high metabolic activity, such as the transition period in dairy cattle.

Key Benefits of VERIVIT Hy D₃

Direct Availability

By feeding VERIVIT Hy D₃, calcidiol bypasses the liver and is immediately available for utilization by the animal's body, ensuring consistent and effective supplementation.

Supports High Metabolic Activity

During challenging periods like the transition phase, when metabolic demands increase, the direct absorption of calcidiol minimizes the risk of deficiency and supports better health outcomes.

Enhanced Calcium Absorption

With available calcidiol, animals can utilize calcium more effectively, promoting strong bones and preventing metabolic disorders.

Improved Immune Function

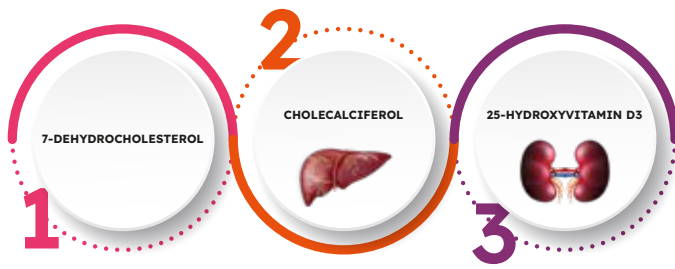

Directly available Vitamin D₃ supports immune regulation, enhancing the animal's resilience against infections.

“...minimizing the risk of deficiency...”

VERIVIT Hy D₃ Liquid – Ensuring Optimal Health with Directly Available Vitamin D₃!

Nutrition

How to Use **VERIVIT Hy D3 Liquid**

Dosage Recommendations

Follow specific dosage instructions provided on the product label or consult with a veterinarian or animal nutritionist to tailor the intake based on animal type and needs. The typical dosage recommendation is

Chickens for fattening

1 L per 1 000 L drinking water

Turkeys for fattening

1 L per 1 000 L drinking water

Other poultry

800 ml per 1 000 L drinking water

Administration Methods

Can be mixed into drinking water for easy distribution, ensuring all animals receive adequate supplementation. Suitable for various livestock species, including poultry, swine, and ruminants, enhancing their nutrient intake and overall health.

Compatibility

VERIVIT Hy D3 Liquid integrates well with other nutritional programs, making it an essential addition to comprehensive feeding strategies.

Health with Directly Available Vitamin D3!

Nutrition

Complementary Dietetic Feed

Composition	Propylene glycol and Sorbitol
Product Classification	Vitamins and provitamins and chemically well-defined substances having similar effect: 3a670a 25-hydroxycholecalciferol-50 mg
Manufacturing Date	
Expiry Date	2 years from production date
Batch Number	
Application	Solution for oral administration through drinking water systems. Hydroxyl D3 is a complementary dietetic feed for particular nutritional purposes for poultry (excluding geese and pigeons).
Dosage	Chickens for fattening: 1 L per 1 000 L drinking water Turkeys for fattening: 1 L per 1 000 L drinking water Other poultry: 800 ml per 1 000 L drinking water
Storage	Store in a closed recipient in a cool, dark place.
Net Weight	1 KG (1 Ltr)

Notes:

Keep out of reach of children. Neither retailer nor manufacturer shall be liable for damages resulting from misuse. Eventual changes of colour and brightness do not alter the quality and functionality of the product. Shake before use.

EXCLUSIVELY TO BE USED IN THE PREPARATION OF ANIMAL FEED
